## THE WORLD WINTER SERVICE & ROAD RESILIENCE CONGRESS

is a worldwide event that draws on decades of PIARC experience. Every 4 years, it brings together **1000 to 1200 road experts, professionals** and **120 exhibitors from around the world.**

This congress is an unique opportunity to discuss essential topics about roads in winter: **traffic management pavement conditions, de-icing agents, equipment and users information** remain crucial issues for many PIARC members.

**Ensuring the resilience of roads and transport services is a priority** for all stakeholders who face infrastructure deterioration, budget restrictions, weather adversity and fast-paced evolution in users expectations.
